Foreword	xxiii

## I BACKGROUND MATERIAL AND MATHEMATICAL MODELING 1

<b>1 Introduction</b>	<b>3</b>
1.1 Main Areas of Manufacturing . . . . .	3
1.2 Main Problems of Production Systems Engineering . . . . .	4
1.2.1 Complicating phenomena . . . . .	4
1.2.2 Analysis, continuous improvement, and design problems .	6
1.2.3 Fundamental laws of Production Systems Engineering . .	7
1.2.4 Techniques used in this textbook . . . . .	8
1.3 Summary . . . . .	9
1.4 Problems . . . . .	9
1.5 Annotated Bibliography . . . . .	10
<b>2 Mathematical Tools: Elements of Probability Theory</b>	<b>13</b>
2.1 Random Events . . . . .	14
2.1.1 Terminology . . . . .	14
2.1.2 Axioms of probability and their corollaries . . . . .	14
2.1.3 Conditional probability . . . . .	16
2.1.4 Independence . . . . .	18
2.1.5 Total probability formula . . . . .	19
2.1.6 Bayes's formula . . . . .	20
2.2 Random Variables . . . . .	21
2.2.1 Terminology . . . . .	21
2.2.2 Discrete random variables . . . . .	22
2.2.3 Continuous random variables . . . . .	26

2.2.4	Expected value, variance, and coefficient of variation . . .	36
2.2.5	Vector random variables . . . . .	38
2.2.6	Asymptotic properties of sums of random variables . . . .	40
2.3	Random Processes . . . . .	43
2.3.1	Terminology . . . . .	43
2.3.2	Continuous time, continuous space random processes . . .	44
2.3.3	Markov processes . . . . .	46
2.4	Summary . . . . .	56
2.5	Problems . . . . .	57
2.6	Annotated Bibliography . . . . .	59
<b>3</b>	<b>Mathematical Modeling of Production Systems</b>	<b>61</b>
3.1	Types of Production Systems . . . . .	62
3.1.1	Serial production lines . . . . .	62
3.1.2	Assembly systems . . . . .	64
3.2	Structural Modeling . . . . .	66
3.3	Mathematical Models of Machines . . . . .	68
3.3.1	Timing issues . . . . .	68
3.3.2	Machine reliability models . . . . .	70
3.3.3	Notations . . . . .	74
3.3.4	Machine model identification . . . . .	75
3.3.5	Calculating parameters of aggregated machines . . . . .	77
3.3.6	Machine quality models . . . . .	82
3.4	Mathematical Models of Buffers . . . . .	83
3.4.1	Modeling . . . . .	83
3.4.2	Buffer parameters identification . . . . .	83
3.5	Modeling Interactions between Machines and Buffers . . . . .	84
3.5.1	Slotted time case . . . . .	85
3.5.2	Continuous time case . . . . .	85
3.6	Performance Measures . . . . .	86
3.6.1	Production rate and throughput . . . . .	86
3.6.2	Work-in-process and finished goods inventory . . . . .	87
3.6.3	Probabilities of blockages and starvations . . . . .	88
3.6.4	Residence time . . . . .	89
3.6.5	Due-time performance . . . . .	90
3.6.6	Transient characteristics . . . . .	90
3.6.7	Evaluating performance measures on the factory floor . . . . .	90
3.7	Model Validation . . . . .	91
3.8	Steps of Modeling, Analysis, Design, and Improvement . . . . .	92
3.8.1	Modeling . . . . .	92
3.8.2	Analysis, continuous improvement, and design . . . . .	92
3.9	Simplification: Transforming Exponential Models into Bernoulli Models . . . . .	93
3.9.1	Motivation . . . . .	93
3.9.2	Exponential and Bernoulli lines considered . . . . .	93

3.9.3	The exp-B transformation . . . . .	94
3.9.4	The B-exp transformation . . . . .	100
3.9.5	Exp-B and B-exp transformations for assembly systems . . . . .	101
3.10	Case Studies . . . . .	102
3.10.1	Automotive ignition coil processing system . . . . .	102
3.10.2	Automotive paint shop production system . . . . .	106
3.10.3	Automotive ignition module assembly system . . . . .	110
3.11	Summary . . . . .	113
3.12	Problems . . . . .	115
3.13	Annotated Bibliography . . . . .	117

## II SERIAL PRODUCTION LINES WITH BERNOULLI MODEL OF MACHINE RELIABILITY 121

<b>4</b>	<b>Analysis of Bernoulli Lines</b>	<b>123</b>
4.1	Two-machine Lines . . . . .	124
4.1.1	Mathematical description . . . . .	124
4.1.2	Steady state probabilities . . . . .	126
4.1.3	Formulas for the performance measures . . . . .	131
4.1.4	Asymptotic properties . . . . .	133
4.2	$M > 2$ -machine Lines . . . . .	133
4.2.1	Mathematical description and approach . . . . .	133
4.2.2	Aggregation procedure and its properties . . . . .	137
4.2.3	Formulas for the performance measures . . . . .	141
4.2.4	Asymptotic properties of $M > 2$ -machine lines . . . . .	143
4.2.5	Accuracy of the estimates . . . . .	143
4.3	System-Theoretic Properties . . . . .	154
4.3.1	Static laws of production systems . . . . .	154
4.3.2	Reversibility . . . . .	154
4.3.3	Monotonicity . . . . .	156
4.4	Case Studies . . . . .	156
4.4.1	Automotive ignition coil processing system . . . . .	156
4.4.2	Automotive paint shop production system . . . . .	159
4.5	Summary . . . . .	161
4.6	Problems . . . . .	162
4.7	Annotated Bibliography . . . . .	165
<b>5</b>	<b>Continuous Improvement of Bernoulli Lines</b>	<b>167</b>
5.1	Constrained Improvability . . . . .	168
5.1.1	Resource constraints and definitions . . . . .	168
5.1.2	Improvability with respect to WF . . . . .	169
5.1.3	Improvability with respect to WF and BC simultaneously . . . . .	172
5.1.4	Improvability with respect to BC . . . . .	174
5.2	Unconstrained Improvability . . . . .	176
5.2.1	Definitions . . . . .	176

5.2.2	Identification of bottlenecks in two-machine lines . . . . .	179
5.2.3	Identification of bottlenecks in $M > 2$ -machine lines . . . . .	179
5.2.4	Potency of buffering . . . . .	189
5.2.5	Designing continuous improvement projects . . . . .	190
5.3	Measurement-based Management of Production Systems . . . . .	190
5.4	Case Studies . . . . .	194
5.4.1	Automotive ignition coil processing system . . . . .	194
5.4.2	Automotive paint shop production system . . . . .	195
5.5	Summary . . . . .	195
5.6	Problems . . . . .	197
5.7	Annotated Bibliography . . . . .	199
<b>6</b>	<b>Design of Lean Bernoulli Lines</b> . . . . .	<b>201</b>
6.1	Parametrization and Problem Formulation . . . . .	201
6.2	Lean Buffering in Bernoulli Lines with Identical Machines . . . . .	202
6.2.1	Two-machine lines . . . . .	202
6.2.2	Three-machine lines . . . . .	204
6.2.3	$M > 3$ -machine lines . . . . .	204
6.3	Lean Buffering in Serial Lines with Non-identical Bernoulli Ma- chines . . . . .	207
6.3.1	Two-machine lines . . . . .	207
6.3.2	$M > 2$ -machine lines . . . . .	208
6.4	Case Studies . . . . .	216
6.4.1	Automotive ignition coil processing system . . . . .	216
6.4.2	Automotive paint shop production system . . . . .	217
6.5	Summary . . . . .	218
6.6	Problems . . . . .	218
6.7	Annotated Bibliography . . . . .	219
<b>7</b>	<b>Closed Bernoulli Lines</b> . . . . .	<b>221</b>
7.1	System Model and Problem Formulation . . . . .	223
7.1.1	Model . . . . .	223
7.1.2	Problems addressed . . . . .	223
7.2	Performance Analysis, Monotonicity, Reversibility, and Unimpeding Closed Lines . . . . .	225
7.2.1	Two-machine lines . . . . .	225
7.2.2	$M > 2$ -machine lines . . . . .	228
7.3	Improvability . . . . .	230
7.3.1	Two-machine lines . . . . .	230
7.3.2	$M > 2$ -machine lines . . . . .	231
7.3.3	Comparisons . . . . .	235
7.4	Bottleneck Identification . . . . .	236
7.4.1	Two-machine lines . . . . .	236
7.4.2	$M > 2$ -machine lines . . . . .	237
7.5	Leanness . . . . .	239
7.6	Case Study . . . . .	241

7.6.1	Modeling and model validation of closed automotive paint shop production system . . . . .	241
7.6.2	$S$ -improvability . . . . .	242
7.6.3	Lean system design . . . . .	242
7.7	Summary . . . . .	242
7.8	Problems . . . . .	243
7.9	Annotated Bibliography . . . . .	244
<b>8</b>	<b>Product Quality in Bernoulli Lines</b>	<b>247</b>
8.1	Bernoulli Lines with Non-perfect Quality Machines . . . . .	248
8.1.1	Model and problem formulation . . . . .	248
8.1.2	Performance analysis . . . . .	250
8.1.3	Bottlenecks . . . . .	254
8.1.4	Design . . . . .	259
8.2	Bernoulli Lines with Quality-Quantity Coupling Machines . . . . .	263
8.2.1	Model and problem formulation . . . . .	263
8.2.2	Monotonicity properties . . . . .	264
8.2.3	Bottlenecks . . . . .	267
8.3	Bernoulli Lines with Rework . . . . .	269
8.3.1	Model and problem formulation . . . . .	271
8.3.2	Performance analysis . . . . .	272
8.3.3	Bottleneck identification . . . . .	278
8.4	Summary . . . . .	287
8.5	Problems . . . . .	288
8.6	Annotated Bibliography . . . . .	289
<b>9</b>	<b>Customer Demand Satisfaction in Bernoulli Lines</b>	<b>293</b>
9.1	Modeling and Parametrization . . . . .	296
9.1.1	Production-inventory-customer (PIC) model . . . . .	296
9.1.2	Due-time performance measure . . . . .	297
9.1.3	Parametrization . . . . .	297
9.2	Analysis of $DTP$ . . . . .	298
9.2.1	Evaluating $DTP$ in PIC systems with one-machine PS . . . . .	298
9.2.2	Evaluating $DTP$ in PIC systems with $M$ -machine PS . . . . .	300
9.3	Design of Lean FGB for Desired $DTP$ . . . . .	302
9.3.1	Lean FGB . . . . .	302
9.3.2	Conservation of filtering . . . . .	302
9.4	Analysis of $DTP$ for Random Demand . . . . .	303
9.4.1	Random demand modeling . . . . .	303
9.4.2	Evaluating $DTP$ for random demand . . . . .	305
9.4.3	$DTP$ degradation as a function of demand variability . . . . .	306
9.4.4	Dependence of $DTP$ on the shape of demand pmf's . . . . .	308
9.5	Case Study . . . . .	308
9.6	Summary . . . . .	311
9.7	Problems . . . . .	312
9.8	Annotated Bibliography . . . . .	313

<b>10 Transient Behavior of Bernoulli Lines</b>	<b>315</b>
10.1 Problem Formulation . . . . .	316
10.1.1 Mathematical description . . . . .	316
10.1.2 Second largest eigenvalue problem . . . . .	317
10.1.3 Pre-exponential factor problem . . . . .	318
10.1.4 Settling time problem . . . . .	319
10.1.5 Production losses problem . . . . .	319
10.2 Analysis of the Second Largest Eigenvalue . . . . .	320
10.2.1 Two-machine lines . . . . .	320
10.2.2 Three-machine lines . . . . .	323
10.3 Analysis of the Pre-exponential Factors . . . . .	323
10.4 Analysis of the Settling Time . . . . .	326
10.4.1 Behavior of $PR(n)$ and $WIP(n)$ . . . . .	326
10.4.2 Analysis of $t_{sPR}$ and $t_{sWIP}$ . . . . .	332
10.5 Analysis of the Production Losses . . . . .	332
10.5.1 Approach . . . . .	332
10.5.2 Percent of loss when the buffers are empty at the beginning of the shift . . . . .	334
10.5.3 Percent of loss when the buffers are not empty at the beginning of the shift . . . . .	336
10.6 Summary . . . . .	336
10.7 Problems . . . . .	338
10.8 Annotated Bibliography . . . . .	339

### III SERIAL PRODUCTION LINES WITH CONTINUOUS TIME MODELS OF MACHINE RELIABILITY 341

<b>11 Analysis of Exponential Lines</b>	<b>343</b>
11.1 Synchronous Exponential Lines . . . . .	344
11.1.1 Two-machine case . . . . .	344
11.1.2 $M > 2$ -machine case . . . . .	352
11.2 Asynchronous Exponential Lines . . . . .	361
11.2.1 Two-machine case . . . . .	361
11.2.2 $M > 2$ -machine case . . . . .	374
11.3 Case Studies . . . . .	381
11.3.1 Automotive ignition coil processing system . . . . .	381
11.3.2 Crankshaft production line . . . . .	383
11.4 Summary . . . . .	386
11.5 Problems . . . . .	386
11.6 Annotated Bibliography . . . . .	389
<b>12 Analysis of Non-Exponential Lines</b>	<b>391</b>
12.1 Systems Considered . . . . .	392
12.1.1 Mathematical description . . . . .	392
12.1.2 Second-order-similar production lines . . . . .	393

12.2	Sensitivity of $PR$ and $TP$ to Machine Reliability Model . . . . .	394
12.3	Empirical Formulas for $PR$ and $TP$ . . . . .	404
12.4	Summary . . . . .	409
12.5	Problems . . . . .	409
12.6	Annotated Bibliography . . . . .	410
<b>13</b>	<b>Improvement of Continuous Lines</b>	<b>411</b>
13.1	Constrained Improvability . . . . .	411
13.1.1	Resource constraints and definitions . . . . .	413
13.1.2	Improvability with respect to CT . . . . .	414
13.1.3	Improvability with respect to BC . . . . .	418
13.2	Unconstrained Improvability . . . . .	424
13.2.1	Definitions . . . . .	424
13.2.2	One-machine lines . . . . .	429
13.2.3	Two-machine synchronous exponential lines . . . . .	430
13.2.4	Asynchronous exponential lines . . . . .	432
13.2.5	$M \geq 2$ -machine non-exponential lines . . . . .	433
13.2.6	Buffering potency and measurement-based management . . . . .	434
13.3	Case Study . . . . .	434
13.4	Summary . . . . .	437
13.5	Problems . . . . .	437
13.6	Annotated Bibliography . . . . .	439
<b>14</b>	<b>Design of Lean Continuous Lines</b>	<b>441</b>
14.1	Parametrization and Problem Formulation . . . . .	441
14.2	Lean Buffering in Synchronous Lines with Identical Exponential Machines . . . . .	443
14.2.1	Two-machine lines . . . . .	443
14.2.2	Three-machine lines . . . . .	445
14.2.3	$M > 3$ -machine lines . . . . .	445
14.3	Lean Buffering in Synchronous Lines with Non-identical Expo- nential Machines . . . . .	451
14.3.1	Two-machine lines . . . . .	452
14.3.2	$M > 2$ -machine lines . . . . .	452
14.4	Lean Buffering in Synchronous Lines with Non-exponential Ma- chines . . . . .	456
14.4.1	Approach . . . . .	456
14.4.2	Sensitivity of $k_E$ to machine reliability models . . . . .	458
14.4.3	Empirical formulas for $k_E$ . . . . .	462
14.5	Summary . . . . .	467
14.6	Problems . . . . .	468
14.7	Annotated Bibliography . . . . .	469

<b>15 Customer Demand Satisfaction in Continuous Lines</b>	<b>471</b>
15.1 Modeling and Parametrization . . . . .	471
15.1.1 Production-inventory-customer (PIC) system . . . . .	471
15.1.2 <i>DTP</i> definition . . . . .	473
15.1.3 Parametrization . . . . .	473
15.2 <i>DTP</i> Evaluation in PIC Systems with Exponential Machines . .	474
15.2.1 <i>DTP</i> in PIC systems with one-machine PS . . . . .	474
15.2.2 <i>DTP</i> in PIC systems with $M$ -machine PS . . . . .	475
15.3 <i>DTP</i> in PIC Systems with Non-exponential PS . . . . .	477
15.4 Lean FGB and Conservation of Filtering in PIC Systems with Exponential Machines . . . . .	479
15.4.1 Lean FGB . . . . .	479
15.4.2 Conservation of filtering in lean systems . . . . .	479
15.5 <i>DTP</i> in the Case of Random Demand . . . . .	482
15.5.1 Random demand modeling . . . . .	482
15.5.2 <i>DTP</i> for random demand in PIC systems with exponen- tial machines . . . . .	484
15.5.3 <i>DTP</i> degradation as a function of demand variability . .	485
15.5.4 Effect of demand pdf on <i>DTP</i> . . . . .	487
15.6 Summary . . . . .	490
15.7 Problems . . . . .	490
15.8 Annotated Bibliography . . . . .	492
<b>IV ASSEMBLY SYSTEMS</b>	<b>493</b>
<b>16 Assembly Systems with Bernoulli Model of Machine Reliability</b>	<b>495</b>
16.1 Analysis of Bernoulli Assembly Systems . . . . .	495
16.1.1 Three-machine assembly systems . . . . .	495
16.1.2 $M > 3$ -machine assembly systems . . . . .	502
16.2 Continuous Improvement of Bernoulli Assembly Systems . . . .	511
16.2.1 Constrained improvability . . . . .	511
16.2.2 Unconstrained improvability . . . . .	515
16.3 Lean Buffering in Bernoulli Assembly Systems . . . . .	519
16.4 Customer Demand Satisfaction in Bernoulli Assembly Systems .	519
16.5 Case Studies . . . . .	520
16.5.1 Automotive ignition module assembly system . . . . .	520
16.5.2 Injection molding - assembly system . . . . .	522
16.6 Summary . . . . .	523
16.7 Problems . . . . .	524
16.8 Annotated Bibliography . . . . .	525
<b>17 Assembly Systems with Continuous Time Models of Machine Reliability</b>	<b>527</b>
17.1 Analysis of Assembly Systems with Exponential Machines . . . .	527
17.1.1 Systems addressed . . . . .	527

17.1.2	Synchronous case . . . . .	528
17.1.3	Asynchronous case . . . . .	532
17.2	Analysis of Non-exponential Assembly Systems . . . . .	536
17.3	Improvement of Assembly Systems with Continuous Time Models of Machine Reliability . . . . .	539
17.3.1	Constrained improvability . . . . .	539
17.3.2	Unconstrained improvability . . . . .	540
17.4	Design of Lean Buffering and Customer Demand Satisfaction in Assembly Systems with Continuous Machines . . . . .	540
17.4.1	Lean buffering . . . . .	540
17.4.2	Customer demand satisfaction . . . . .	542
17.5	Summary . . . . .	542
17.6	Problems . . . . .	542
17.7	Annotated Bibliography . . . . .	543
<b>V</b>	<b>SUMMARY, PSE TOOLBOX, AND PROOFS</b>	<b>545</b>
<b>18</b>	<b>Summary of Main Facts of Production Systems Engineering</b>	<b>547</b>
18.1	Individual Machines . . . . .	547
18.2	Serial Lines . . . . .	548
18.2.1	Performance analysis . . . . .	548
18.2.2	Continuous improvement . . . . .	551
18.2.3	Design . . . . .	553
18.3	Assembly Systems . . . . .	554
<b>19</b>	<b>PSE Toolbox</b>	<b>555</b>
19.1	Architecture and Functions . . . . .	555
19.2	Modeling Function . . . . .	557
19.2.1	Aggregation of parallel machines . . . . .	557
19.2.2	Aggregation of consecutive dependent machines . . . . .	558
19.2.3	Exp-B transformation for serial lines . . . . .	559
19.2.4	B-exp transformation for serial lines . . . . .	559
19.3	Performance Analysis Function . . . . .	562
19.3.1	Analysis of serial lines with Bernoulli machines . . . . .	562
19.3.2	Analysis of synchronous serial lines with exponential ma- chines . . . . .	563
19.3.3	Analysis of asynchronous serial lines with exponential ma- chines . . . . .	563
19.3.4	Analysis of closed lines with Bernoulli machines . . . . .	564
19.3.5	Analysis of assembly systems with Bernoulli machines . . . . .	566
19.4	Continuous Improvement Function . . . . .	566
19.4.1	Unimprovable allocation of WF in Bernoulli serial lines . . . . .	567
19.4.2	Unimprovable allocation of WF and BC simultaneously in Bernoulli serial lines . . . . .	568

19.4.3	WF-continuous improvement procedure for Bernoulli serial lines . . . . .	569
19.4.4	BC-continuous improvement procedure for Bernoulli serial lines . . . . .	570
19.4.5	$S$ -continuous improvement procedure for closed Bernoulli lines . . . . .	570
19.5	Bottleneck Identification Function . . . . .	571
19.5.1	BN-m and BN-b in serial lines with Bernoulli machines . . . . .	572
19.5.2	$c$ -BN and BN-b in serial lines with exponential machines . . . . .	572
19.5.3	$c$ -BN and BN-b in serial lines with general models of machine reliability . . . . .	573
19.5.4	BN-m and BN-b in closed lines with Bernoulli machines . . . . .	575
19.6	Lean Buffer Design Function . . . . .	576
19.6.1	Lean buffering for serial lines with identical Bernoulli machines . . . . .	576
19.6.2	Lean buffering for serial lines with non-identical Bernoulli machines . . . . .	577
19.7	Product Quality Function . . . . .	578
19.7.1	Analysis of Bernoulli lines with non-perfect quality machines and inspection operations . . . . .	578
19.8	Customer Demand Satisfaction Function . . . . .	579
19.8.1	$DTP$ in PIC system with one Bernoulli machine . . . . .	580
19.9	Simulation Function . . . . .	580
19.9.1	Simulation of serial lines with Bernoulli machines . . . . .	581
19.9.2	Simulation of serial lines with exponential machines . . . . .	582
19.9.3	Simulation of serial lines with general models of machine reliability . . . . .	582
19.9.4	Simulation of assembly systems with Bernoulli machines . . . . .	584
<b>20</b>	<b>Proofs</b>	<b>587</b>
20.1	Proofs for Part II . . . . .	587
20.1.1	Proofs for Chapter 4 . . . . .	587
20.1.2	Proofs for Chapter 5 . . . . .	599
20.1.3	Proofs for Chapter 6 . . . . .	614
20.1.4	Proofs for Chapter 7 . . . . .	616
20.1.5	Proofs for Chapter 8 . . . . .	621
20.1.6	Proofs for Chapter 9 . . . . .	623
20.1.7	Proofs for Chapter 10 . . . . .	623
20.2	Proofs for Part III . . . . .	624
20.2.1	Proofs for Chapter 11 . . . . .	624
20.2.2	Proofs for Chapter 12 . . . . .	638
20.2.3	Proofs for Chapter 13 . . . . .	642
20.2.4	Proofs for Chapter 14 . . . . .	643
20.2.5	Proofs for Chapter 15 . . . . .	645
20.3	Proofs for Part IV . . . . .	648
20.4	Annotated Bibliography . . . . .	649
